

Green River Flood Impact

- | | |
|-------------------------------------------|---------------------------------------------------|
| Potentially Affected Sewer System | Areas most likely to flood in a lower level event |
| Potentially Affected Stormwater System | Parcels |
| Potentially Affected Stormwater and Sewer | Buildings |
| Potential Mill Creek Flooding | Streams |
| Lowest Flooding | Auburn City Limits |
| Highest Flooding | Regional Cities |
| | Water Features |

This map represents the area that could be flooded, and sanitary sewers and stormwater systems that could back up, in a flood event, depending on a variety of factors. Depths and backups will vary based on the actual magnitude of the event. Areas indicated as lowest could receive anywhere from no flooding to as much as 2 feet, while areas marked highest could receive up to 10 or more feet of water. In addition to the potentially affected sanitary sewers and stormwater systems shown on the map, sanitary sewers and stormwater systems in flooded areas will also be impacted.

Information shown is for general reference purposes only and does not necessarily represent exact geographic or cartographic data as mapped. The City of Auburn makes no warranty as to its accuracy.
